

At **Digital Oil & Gas Solutions**, we develop technology specialized in automation and data management for oil and gas operators. We offer a full suite of monitoring, control, and data tools designed specifically for low-producing and mature wells. Our solutions give you real-time visibility into every asset, reduce operating costs, and keep your wells producing.

Built for the realities of oil and gas operators.
Deployable from day one.

Service	What it is	What it solves
Well Manager	Complete IoT monitoring system with hardware, connectivity, and software in one solution. Real-time data accessible from your phone or computer 24/7.	- No visibility into well status without driving out - Failures you don't see coming - Slow response time to equipment issues
Field Data Capture Application	Mobile app for field operators to log well data digitally while on site. Instantly visible to your entire team, stored in the cloud.	- Paper logbooks no one can access remotely - Data gaps between field visits - Decisions made on outdated information
Pump & Equipment Control	Smart remote controllers for rod pumps, plunger lifts, and ESPs. Turn equipment on/off and adjust settings from anywhere.	- Costly truck rolls for routine adjustments - Long response times in the middle of the night - Equipment damage from delayed intervention
Anomaly Detection	AI and machine learning layer that learns the normal behavior of each individual well and flags subtle deviations early.	- Reactive maintenance that costs more than prevention - Downtime from problems that built up undetected - Lost production on wells you thought were fine
Data Management Services	Cloud-based suite covering invoice automation, data migration, and BI reporting. One unified system for all your operational data.	- Invoices stuck in manual, paper-based workflows - Legacy data scattered across systems and formats - No clear picture of well profitability or OPEX

Delivering low-cost, reliable automation solutions since 2020

Our solutions are built with one goal in mind: give oil and gas operators the tools to run smarter and leaner operations without the complexity or cost of traditional SCADA systems.

50% Lease operating cost reduction

\$4.4M Annual savings from spill prevention

3:1 Proven ROI

15+ States where we deliver innovation

2,200+ Assets deployed

Ready to put your assets' data to work? For us, no well is left behind
